

SIO Shipyard Representative Bi-Weekly Progress Report		
Project: AGOR 28	Contract No.: N00014-12-C-0305	Shipyard: Dakota Creek Industries
Prepared by: Paul D. Bueren Scripps Institution of Oceanography (SIO) 297 Rosecrans St. San Diego, CA 98106	Date: 6 June, 2013	Program Officer: Robert (Tim) Schnoor Office of Naval Research 875 Randolph St ONR 321 Arlington, VA 22203-1995
Distribution Statement A: Approved for public release; distribution unlimited.		Report No. A002.033

1. Meetings:

- i. Participated in weekly conference call.
- ii. Participated in Sally Ride Noise FAT's at B&G Machine.
- iii. Participated in Pilot House Arrangement Discussions.
- iv. Participated in Auto Pilot Modes of Operation Discussions.

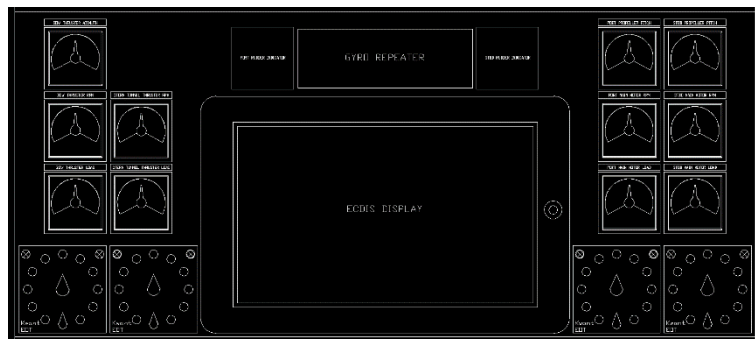

2. The following Shipyard Question Submittals were reviewed and commented on:
No questions issued for this reporting period.

3. Logistics:

- i. Continuing to review Vendor Recommended Spares (VRS).
- ii. Continuing to review Technical Manuals and Supplemental Information.
- iii. The first buy-list for spare parts is near completion and funding.

4. Other Work Items:

- Pilot House Console Face Arrangements –
 - ✓ The operators provided a detailed review of the pilot house face arrangements.
 - ✓ Operator comments were then used to make cut and paste drawings of the center helm station and the wing consoles. Comments on the fiddle board were also provided.
 - ✓ ALION used photos of these drawings to produce detailed CAD versions for review and comment.

- ✓ The operators were able to come to a consensus on the arrangements, which will now be presented to DCI and Mackay for comment.

- Autopilot – The operators are looking for more clarity on exactly how the Kongsberg Autopilot will function. In particular, how will the six power modes be used, if at all, and will the operators be able to control the pitch and rpm independently using the “combinator” propeller controls.
- Sally Ride Genset Noise FAT's
 - ✓ Attended 3 of the 4 scheduled Generator Noise/Vibration FAT's at B&G Machine in Seattle.
 - ✓ For Sally Ride, NCE went with a 24-channel set up and was able to collect all of the data in one 90-minute period (12-channel set up for Armstrong). Each corner of the engine had two tri-axial sensors placed above and below the vibration mounts. Sound levels were also recorded at various loads, including 100 and 110%.
 - ✓ The Genset mounting arrangement had a significant change from how Neil Armstrong Genset's forward mounts were attached to the test bed from those of Sally Ride. For Neil Armstrong, the forward mounting feet extend beyond the isolated slab. For the Sally Ride, all the mounting feet are within the isolated slab boundary. The boundary is the light gray outline. Other photo's, while not as clear, indicate that this was not an issue with the aft mounts (generator end) for either vessel.

Neil Armstrong Forward Mounts:

Sally Ride Forward Mounts:

- ✓ At this time it is not known what affect this will have on the noise and vibration readings. There were some anomalies on the sole set of readings taken for Neil Armstrong, so differences are to be expected.

- Transceiver Room Arrangement - Operators are to provide details of the type, size and location of the equipment racks for the transceiver room. Details of mounting arrangement are also requested. A mounting bracket for the EK60 is also being developed by ALION for installation prior to Phase III.
- Sally Ride Lube Oil Storage Tanks – ABS inspected the P&S lube oil storage tank structure. A pressure test was also witnessed by ABS. No reportable discrepancies were noted.
